

CRITEC GROUP

One Route. **Global Impact.**

~20% of the world's oil moves through the Strait of Hormuz.
Now when that corridor is threatened, it's not just energy markets that react.
It's cost, supply, and continuity across entire industries.

Most breaches
now begin with
**identity
compromise.**

Not sophisticated malware.
Not advanced exploits.

Credentials.
Access.
Trust.

And then your
business **takes a
hit.**

The first disruption is rarely the issue.
It's the knock-on effects across
delayed shipments, volatile costs,
reduced reliability.

The impact is rarely where it starts,
but where your operations depend on
continuity.

This is about ~~oil~~
**securing key-
chokepoints**

Because critical infrastructure underpins movement, energy, and access — when it's exposed, everything built on it is exposed.
